Medication Report

Medication List

Start Typing

Filter by Function

Filter by Medication Class

Building Report

Name	Generic	Brand	Class	Action
test brand 3.4 tesr	test			
Paracetamol		acetaminophen		
Guanfacine / Intuniv		Intuniv		
Lamotrigine / Lamictal		Lamictal		
Haldol/Haloperidol		Haldol		
Gabapentin / Neurontin		Gabapentin		
Esquetim /				

change to
"Select Medications"

* Are we able to add a progress bar or spinning graphic to show that the report is being compiled?

* Can we add a Pop up dialogue that verifies a medication has successfully been added = Medication Added!

too cramped

- Shrink down size
- add more white space around elements for breathing space

center button

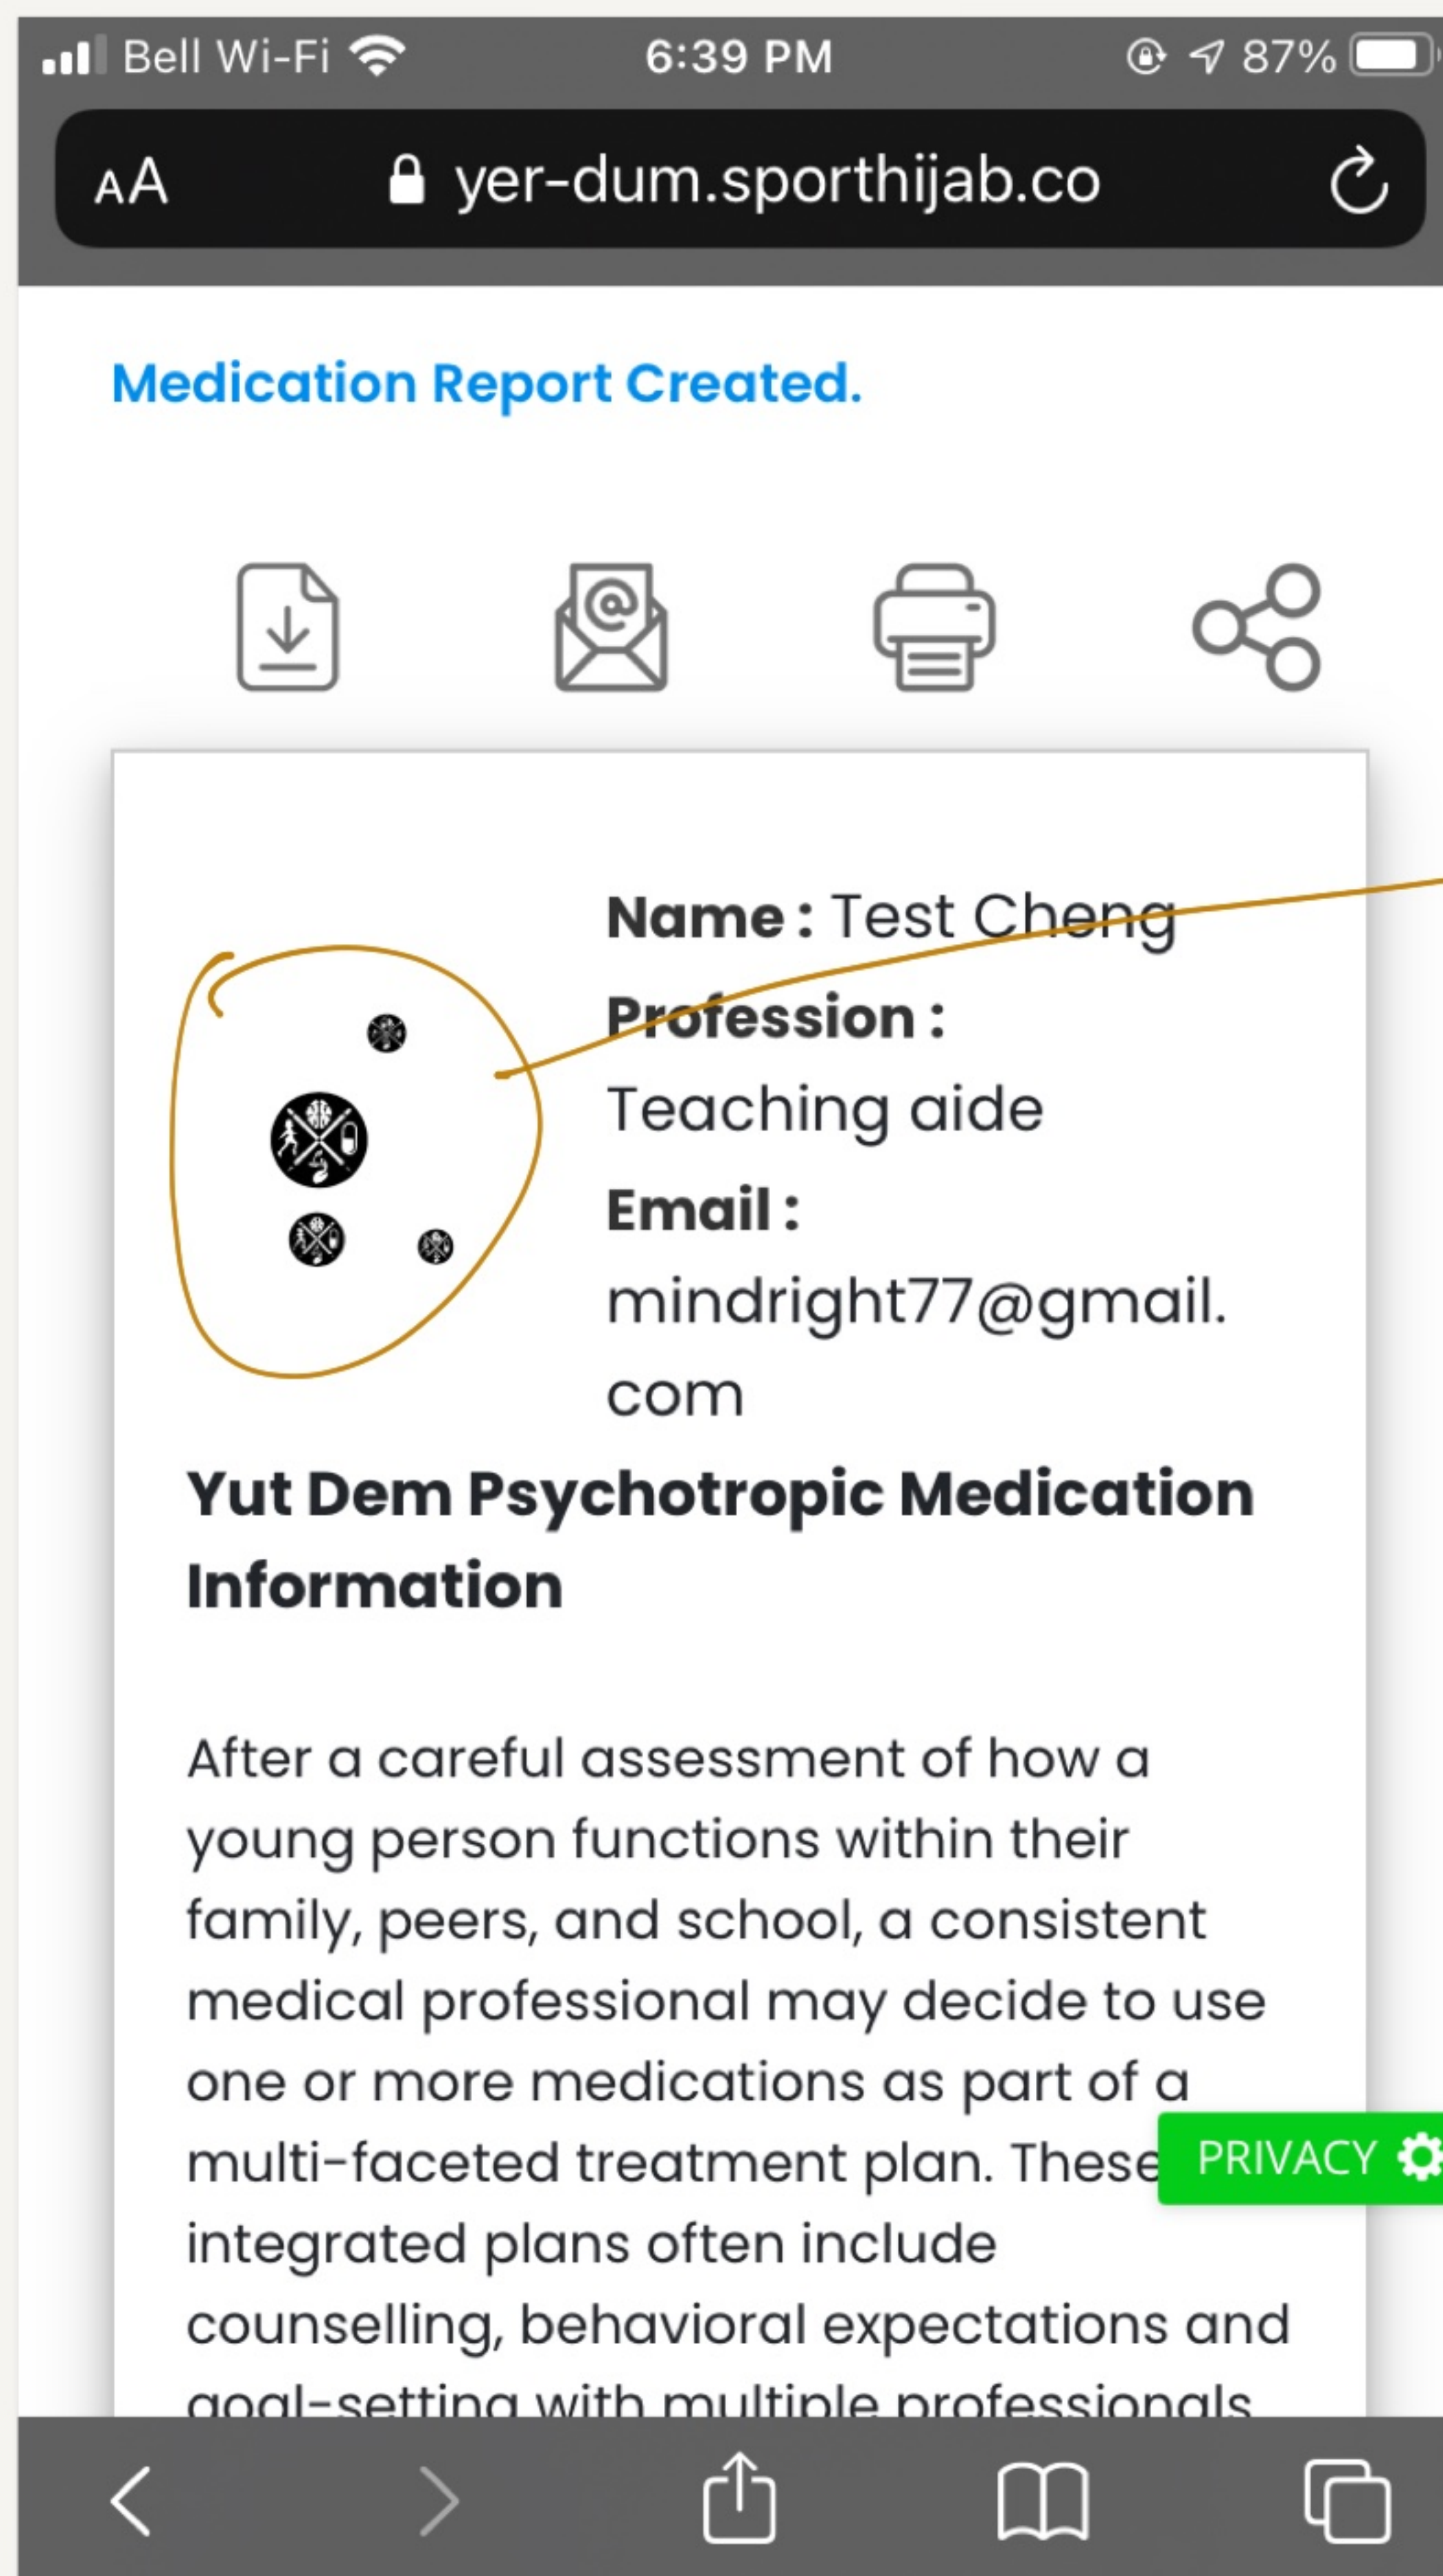

- change to "Build Report"
- when button is pressed can it change back to "Building Report"

Table is too wide for mobile & causes horizontal scrolling

- Just 2 columns to simplify

Name	Action
Generic/Brand	Add

→ Add a visually strong button

* We need to add an icon that allows user to go back to App homepage to start another report

* We also need a way to return back to the main website

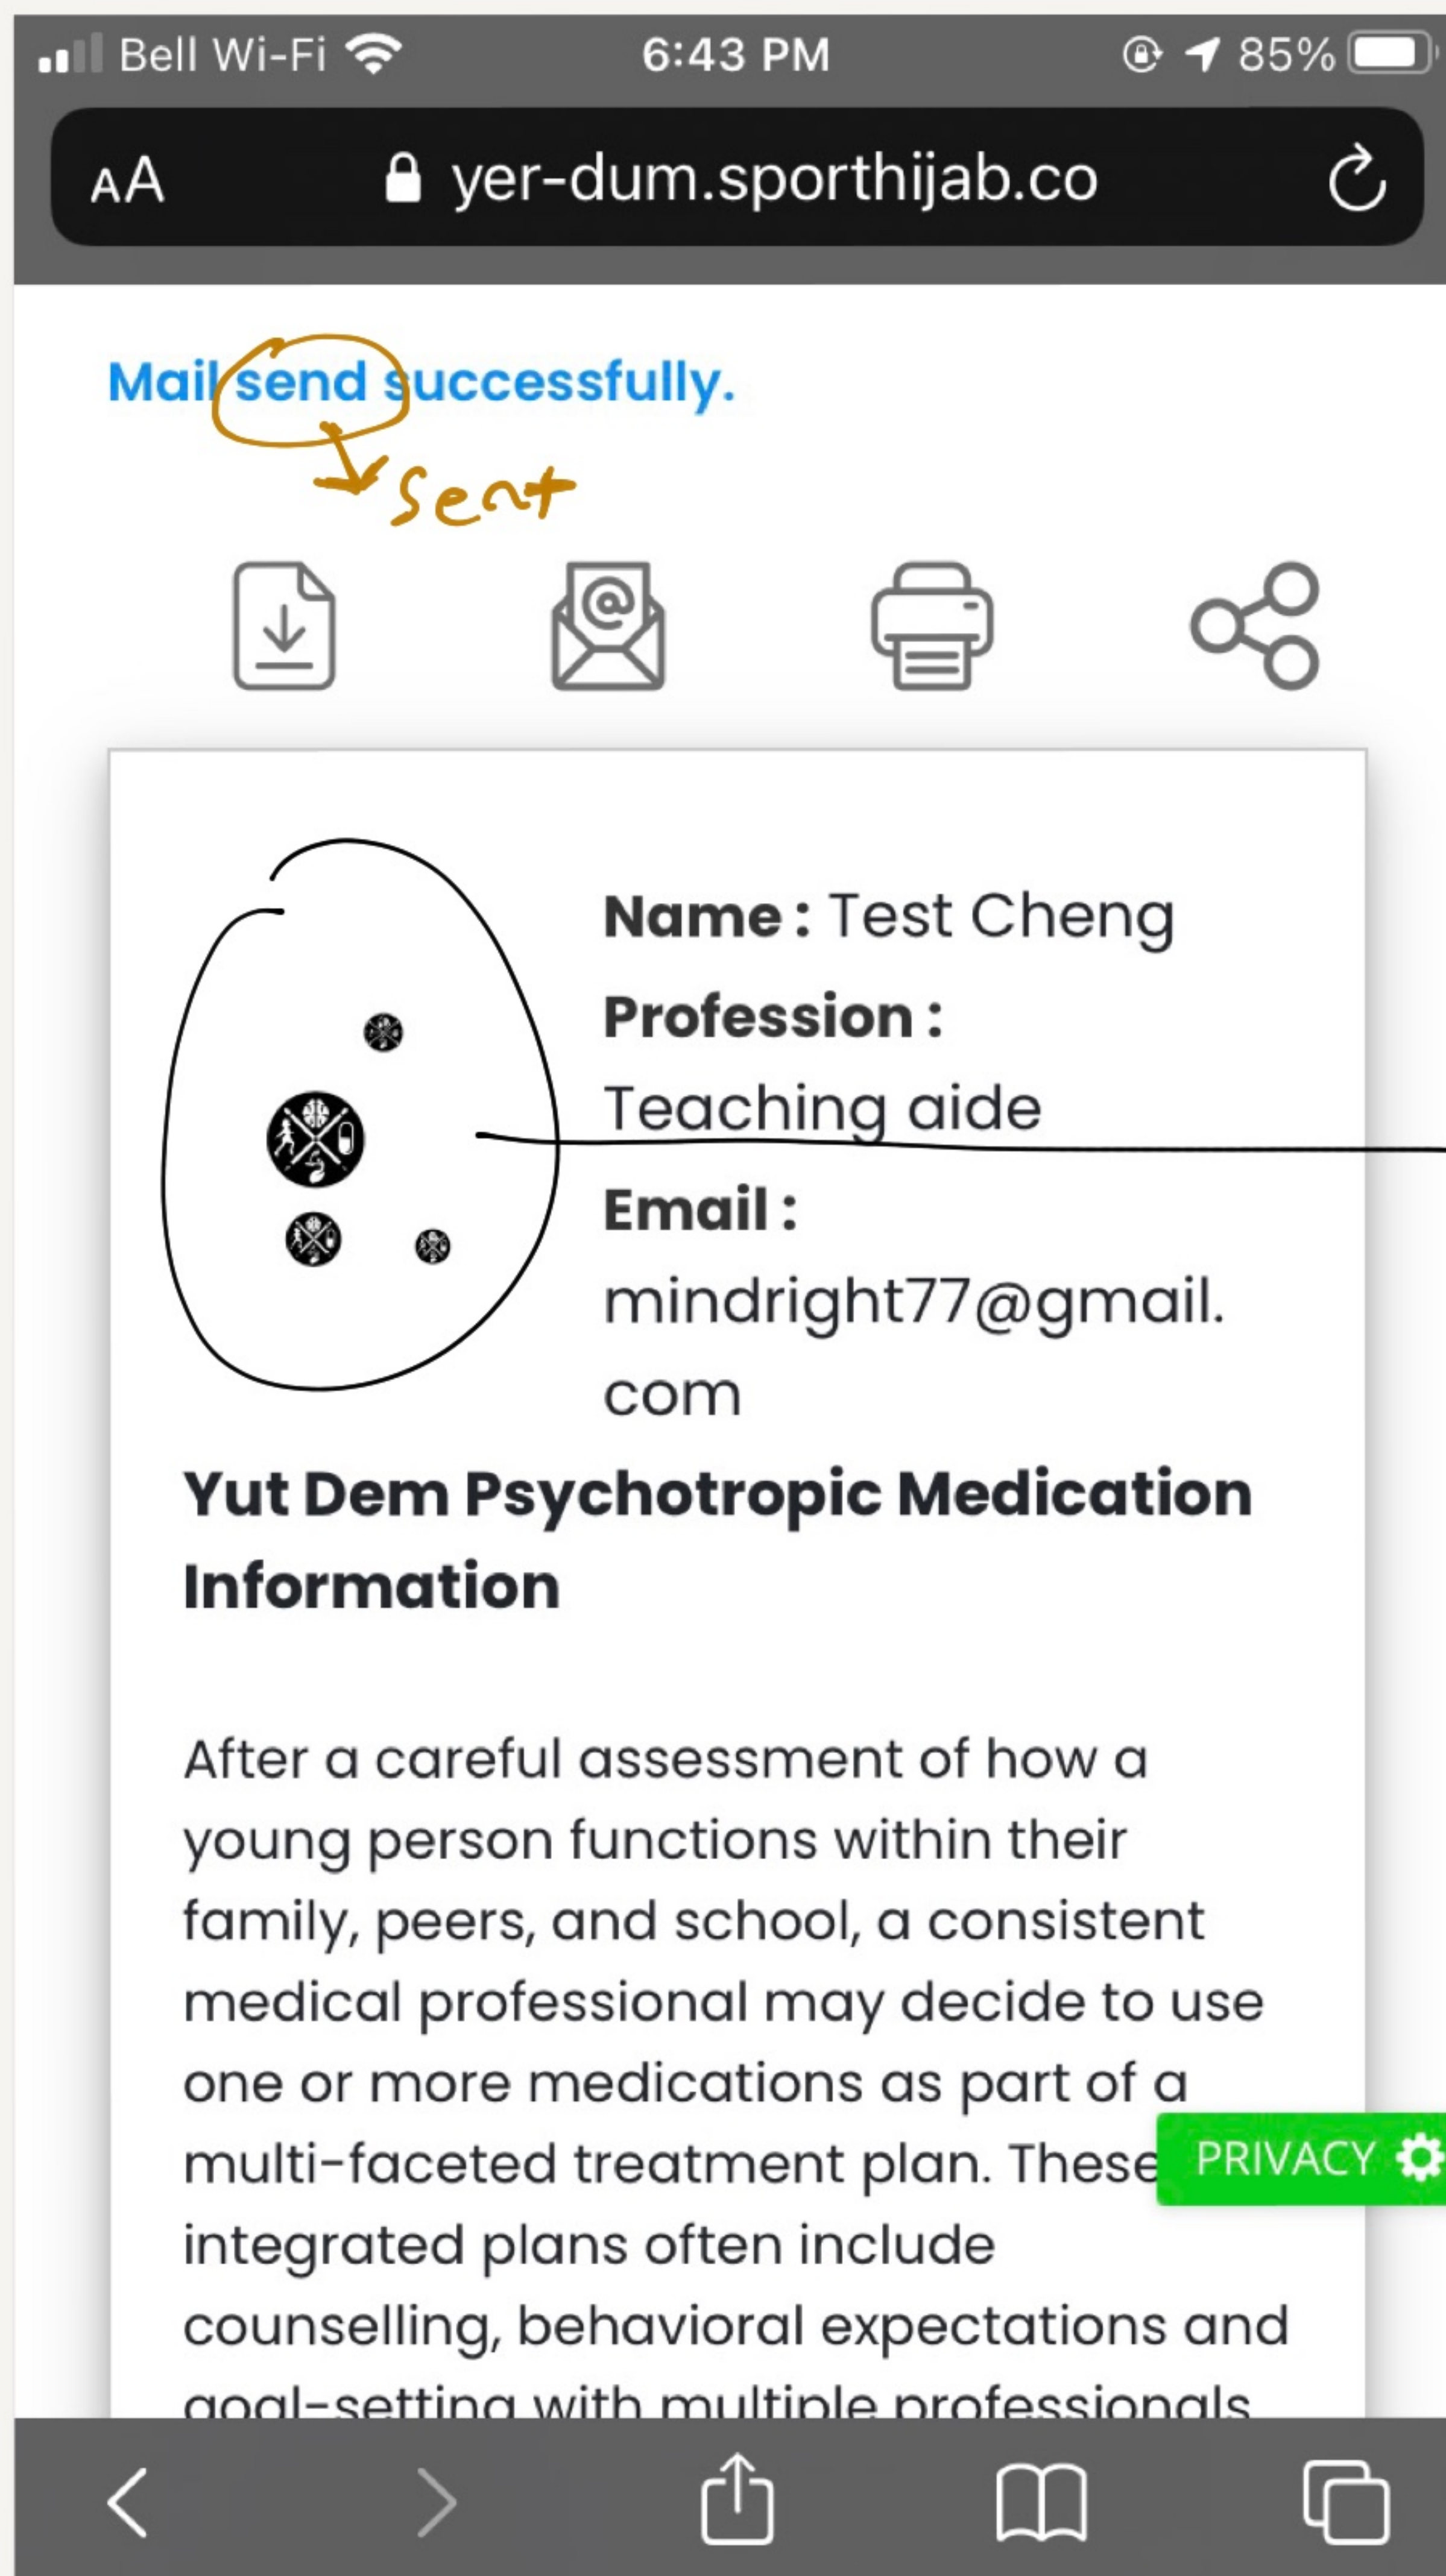

Logo needs to be changed

different practitioners and clinical practices may follow different treatment protocols that vary from published drug monographs. In addition, your child's response will be unique to them and their diagnosis.

• Purpose :

Class: Traditional Mood Stabilizer

Carbamazepine belongs to a group of medications called traditional mood-stabilizers which are effective in treating mood disorders such as bipolar disorder. Carbamazepine is also used for pain control for the treatment of certain types of neurologic pain, as an anticonvulsant to treat seizure disorders (epilepsy) and to treat alcohol withdrawal syndrome.Â

More specifically, Carbamazepine is used for the treatment of the following symptoms:

- Mania, frenzied, abnormally excited or irritated mood, overly distracted
- Mixed episodes of mania and depression that happen at the same time
- Depression, feeling sad, hopeless, guilty, tearful
- Aggression, impulsive or risky behaviour.Â
- Severe PTSD.Â
- Drug and alcohol withdrawal

Carbamazepine works by altering electrical activity in the brain and by decreasing this activity, your childâ€™s mood should return to a normal baseline, and stabilize as long as proper dosing is maintained. In turn, your child or teen should feel in better control of their emotions and have an improvement in their overall functioning.Â

Carbamazepine works by altering electrical activity in the brain and by decreasing this activity, your childâ€™s mood should return to a normal baseline, and stabilize as long as proper dosing is maintained. In turn, your child or teen should feel in better control of their emotions and have an improvement in their overall functioning.Â

Generally, traditional mood stabilizers are effective agents to stabilize mood and manage overt aggressive and disruptive behaviours. However, these medicines are being used less on young children due to harsh long term side effects on the body compounded with the need for ongoing blood work to monitor plasma levels. Instead, atypical antipsychotics and SSRI antidepressants have become the preferred 1st line agents to help with mood stabilization.Â

Carbamazepine comes in various preparations, so you must discuss with the prescribing healthcare provider if your child doesnâ€™t tolerate swallowing capsules, tablets or prefers a liquid or suspension. Extended-release products are also available and usually given twice daily. Dosing may be increased over several weeks, but your child should see some medication effects within 1-2 weeks.

Dosing :

Carbamazepine comes in various preparations, so you must discuss with the prescribing healthcare provider if your child doesnâ€™t tolerate swallowing capsules, tablets or prefers a liquid or suspension. Extended-release products are also available and usually given twice daily. Dosing may be increased over several weeks, but your child should see some medication effects within 1-2 weeks.

Usual dosing according to [Lexicomp](#) drug database:

Children <6 yr

Please advise
- on HTML email
output, strange
symbols are
inserted
- What is the fix?

Comments:

- All browsers displaying App now
- Rendering time for report is much faster + consistently displays
- PDF + Email HTML rendering is working
- working on both Windows + OSX + iOS platforms

* Please review app from end user perspective to optimize navigation, ensure simplicity, usability, and easy understanding of information hierarchy
